

# Peace of Mind For Your EMPLOYEES + CUSTOMERS

**JaniTek**  
CLEANING SOLUTIONS

## Call JaniTek Today

to learn about adding the  
*Electrostatic Disinfecting Program*  
to your cleaning protocols.

### PROCESS:

Daily, Weekly, Monthly  
programs

### DOCUMENTATION:

Letter verifying service,  
documentation sheet  
of areas serviced Detail  
Surface Cleaning

To learn more contact us

Green Seal GS-42  
Certified Cleaning Service

## What's the Buzz with Electrostatic Disinfectant Spraying?

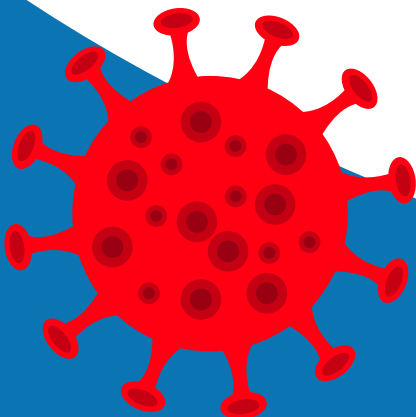

COVID-19 has brought cleaning to the forefront and leaving many to wonder what is the best way to not just clean, but disinfect surfaces that might harbor germ and viral matter.

A seemingly new technology has made headlines around the globe and you may have heard your cleaning company tout it's effectiveness in the fight against COVID-19. This method of spray disinfecting is **electrostatic spraying**. This method is really not new at all, and actually has been around for years. You might not of hear about it as the equipment is very costly and until recently, very few cleaning companies and their clients would pay the price to utilize this effective disinfecting technique.

Electrostatic is based on the principle that "opposite charges" attract and "like charges" repel. Two positively charged things will repel each other. Using this natural electrostatic phenomenon, various manufacturers have developed tools to be used in the cleaning industry. The way it works is water is mixed with disinfectant and is sprayed out with a positive electric charge. That electric charge makes the mixture act like a magnet to any negative or neutral surface that is sprayed. Because of that, the disinfecting spray gets in every nook and cranny and stays there to kill the virus or bacteria. The spray tip used with the spraying unit determines the droplet size of the product based on the EPA listed dwell time. The disinfecting product dissipates/dries and leaves most all surfaces spotless and disinfected.

**Electrostatic disinfectant spraying** is listed under the CDC's cleaning and disinfecting guidelines. It's important to note the CDC recommends a detail clean to remove all gross debris, followed by the spray.

**JaniTek** follows the CDC guidelines to complete COVID-19 Facility Decontaminations. Should your facility have a suspected or actual exposure, or for more information please contact **JaniTek** at **1-888-833-7705** or go to check out our website at **[www.janitek.net](http://www.janitek.net)**.

*JaniTek utilizes the Victory patented electrostatic sprayer systems which are certified compliant with the standards and requirements of the ETL (Edison Testing Lab), the CSA (Canadian Standards Association), the FCC (Federal Communication Commission), the CE (European Commission), the RoHS (Restriction of Hazardous Substances), and the NOM (Mexican Official Standards).*
